

# SECURELY MANAGE DICTATIONS AND PATIENT INFORMATION WITH YOUR SMARTPHONE OR TABLET

## Winscribe MD

Whether you are a busy hospital, clinic or private office, you are looking at getting things done faster and easier with the best possible output. With a user-friendly interface and secure data transmission to protect patient information, Winscribe's MD for Android and iOS mobile devices allows users to manage dictations, schedule patient appointments and access patient information, all while using their iPhones, iPod touch, iPad and Android mobile devices.

Winscribe MD for Android and iPhone platforms are exciting developments as the adoption of smartphone devices by healthcare providers increases. Not only do these applications enable physicians to instantly transfer dictations to typists while on the go, they also enable organizations who have already embraced mobility to deploy an advanced workflow system without incurring additional hardware costs.

**Recording and Patient Schedule Accessibility in One Tool.** Dictation via smartphone or tablet grants both flexibility and convenience to the physician with the functionality of a handheld recorder. Winscribe MD was developed specifically for the healthcare environment and provides physicians with instant access to patient schedules. Winscribe MD also allows dictations to be captured without the need to dictate patient identifiers and work types resulting in improved accuracy and efficiency and eliminating the risk of mistaken identity.

**Full Workflow Integration.** Winscribe MD has been designed to integrate with the Winscribe Dictation workflow system, enabling users to effectively manage their dictation and transcription processes from anywhere and allowing users to send dictations instantly and securely. With options to route work directly to a secretary or transcription team, you have the power of choice in your hand. Dictations can be uploaded anywhere, anytime with patient demographics attached, ensuring document accuracy and accelerating the transcription process.

**Streamlined Workflow.** Winscribe's suite of mobile applications communicates directly with the Winscribe server, and dictations are immediately sent to transcription staff when an internet connection is present. This means that wherever your authors are, dictations are instantly made available to transcription staff, allowing for a more streamlined workload without peaks and troughs.

*\* When a connection is not present, dictations are saved to the local device or flash memory card and sent promptly when a connection is restored.*

**Secure Voice and Data Transmission.** Winscribe's mobile applications allow dictations to be sent directly to a Winscribe server through a secure HTTPS transmission to meet the requirements for secure client data transmission. Winscribe mobile app users can also be configured to use 256-bit encryption, ensuring patient confidentiality is never compromised.

## Advantages of Winscribe MD:

- Improved physician productivity
- Reduced document turnaround time
- Immediate access to patient information
- Better patient health information security

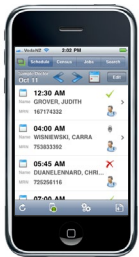

*Better technology for better patient care!*

# Winscribe MD

**Speech Recognition Integration.** Winscribe MD records using high quality audio suitable for use with Winscribe's server based speech recognition solution. Authors are free to dictate anywhere, anytime and have their dictation automatically routed for recognition. This optional functionality improves staff productivity and greatly improves document turnaround time.

**Winscribe's Mobile Technology.** Winscribe has supported mobile dictation since the first version of the Windows Mobile Operating System was released in 2000. Winscribe's commitment is to provide access to the latest technology available so that our customers can take full advantage of the most sophisticated mobile applications in the market.

## Models Supported

### iOS Devices

Winscribe MD supports iPhone devices\* running iPhoneOS v. 3.1.3 and above, including:

- iPhone 3G and 3GS
- iPhone 4 and 4S
- iPhone 5

*\*This application can also run on an iPod Touch and an iPad with the addition of an external microphone.*

### Android Mobile Devices

Winscribe MD supports Android-powered devices running v.1.6 and above of the operating system. A Secure Digital (SD) card must be used with the Android device.
