

WINSCRIBE DICTATION FOR Android™, iPhone® AND BlackBerry® DEVICES

Winscribe Mobility Suite

In today's environment, it is highly important that an organization's staff have the ability to be totally mobile while still having access to their core business applications, such as internet, e-mail and dictation. With this in mind, Winscribe has developed the Winscribe Mobility Suite, which offers a sleek interface for dictating on iPhone, iPad, Android and BlackBerry devices.

Dictation via mobile devices grants both flexibility and convenience to mobile staff members with the functionality of a handheld recorder. Not only do these applications enable professionals to instantly transfer dictations to typists or transcription staff while on the go, they also enable organizations who have already embraced mobility to deploy an advanced workflow system without incurring additional hardware costs. Far from being a glorified note taker, the Winscribe solution provides professionals with full dictation functionality, including insert, over-write and job type selection. As well as being easy to use, these solutions are secure and meet the requirements for secure client data protection.

Full Workflow Integration.

Winscribe's Mobility has been designed to integrate with Winscribe's digital dictation workflow system, enabling users to effectively manage the dictation and transcription process from anywhere and allowing users to send dictations securely and monitor the progress of sent jobs. With options to route work directly to a secretary or transcription team you have the power of choice in your hand. Dictations can be uploaded anywhere, anytime with client/patient demographics attached ensuring document accuracy and accelerating the transcription process.

Streamlined Workload.

Winscribe's suite of mobile applications communicates directly with the Winscribe server, and dictations are immediately sent to transcription staff when an internet connection is present. This means that wherever your authors are, dictations are instantly made available to transcription staff, allowing for a more streamlined workload without peaks and troughs.

** When a connection is not present, dictations are saved to the local device or flash memory card and sent promptly when a connection is restored.*

Secure Voice and Data Transmission.

Winscribe's mobile applications allow dictations to be sent directly to a Winscribe server through a secure HTTPS transmission to meet the requirements for secure client data transmission. Some devices can also be configured to use 256-bit encryption ensuring patient/client confidentiality is never compromised.

Faster Document Turnaround through Optional Speech Recognition Integration.

Winscribe's mobile applications record using high quality audio suitable for use with Winscribe's server based speech recognition solution. Authors are free to dictate anywhere, anytime and have their dictation automatically routed for recognition. This optional functionality further improves document turnaround time.

"The ability to dictate and transcribe offsite has had a huge impact, not only on improving service to our clients but also allowing flexible work practices for our staff..."
